Work Experience

Software Engineer II

November 2024 - Present

Guild Education - Denver, CO

- Led technical spikes for internal API and MCP platform integrations, enabling standardized backend consumption across engineering teams.
- Designed and implemented automated payment and reporting workflows using TypeScript, PostgreSQL, and EventBridge, reducing manual intervention and operational errors.
- Built observability and alerting pipelines with Datadog and Slack, cutting payment mismatch detection time by 80%.
- Drove cross-functional engineering initiatives by leading technical research, design discussions, and translating spike outcomes into prioritized tickets.

Software Engineer I

March 2022 - November 2024

Koch Ag & Energy Solutions, LLC - Wichita, KS

- Migrated legacy JavaScript services to TypeScript and restructured infrastructure with the Serverless Framework, improving maintainability and scalability.
- Built scalable REST APIs for real-time truck and fertilizer shipment tracking using AWS API Gateway and DynamoDB, processing 50K+ daily telemetry updates.
- Designed event-driven architectures using AWS EventBridge and Lambda.

Associate Software Developer

May 21 - March 2022

OnPoint - KES - Wichita, KS

- Developed full-stack applications using Vue.js, TypeScript, and Python.
- Built dynamic tables to display data from DynamoDB.
- Maintained the website, fixed visual and workflow issues, and improved test coverage with Jest.

Education

University of Colorado Boulder, Masters in Computer Science - May 2024 - GPA: 3.6/4

Missouri State University, Bachelor of Computer Science - May 2021 - GPA: 3.7/4

Projects

TheTaleTribe - AI-powered collaborative story writing platform thetaletribe.com

- Designed a four-layer cognitive memory architecture (working, procedural, semantic, episodic) for persistent AI narrative context across sessions.
- Architected full stack on Google Cloud and Firebase (TypeScript, React) with IAM hardening and Terraform-managed infra
